# DevOps Simulation

MARC KILGUS | TECHNICAL ACCOUNT MANAGER | @ZAUBERCLOWN

# Digital transformation is difficult.

# What DevOps is Not

## Dev + Ops

The name implies combining the traditional responsibilities of Development and Operations into a single team. This is not the case!

## Developers in Production

Instead, DevOps promotes closer cooperation between disciplines to define guiding principles that promote excellence.

## Tooling and Automation

Without culture shift and trust across teams, tools and strategy **do not matter**.

**The largest single threat to the success of any DevOps implementation is PEOPLE**
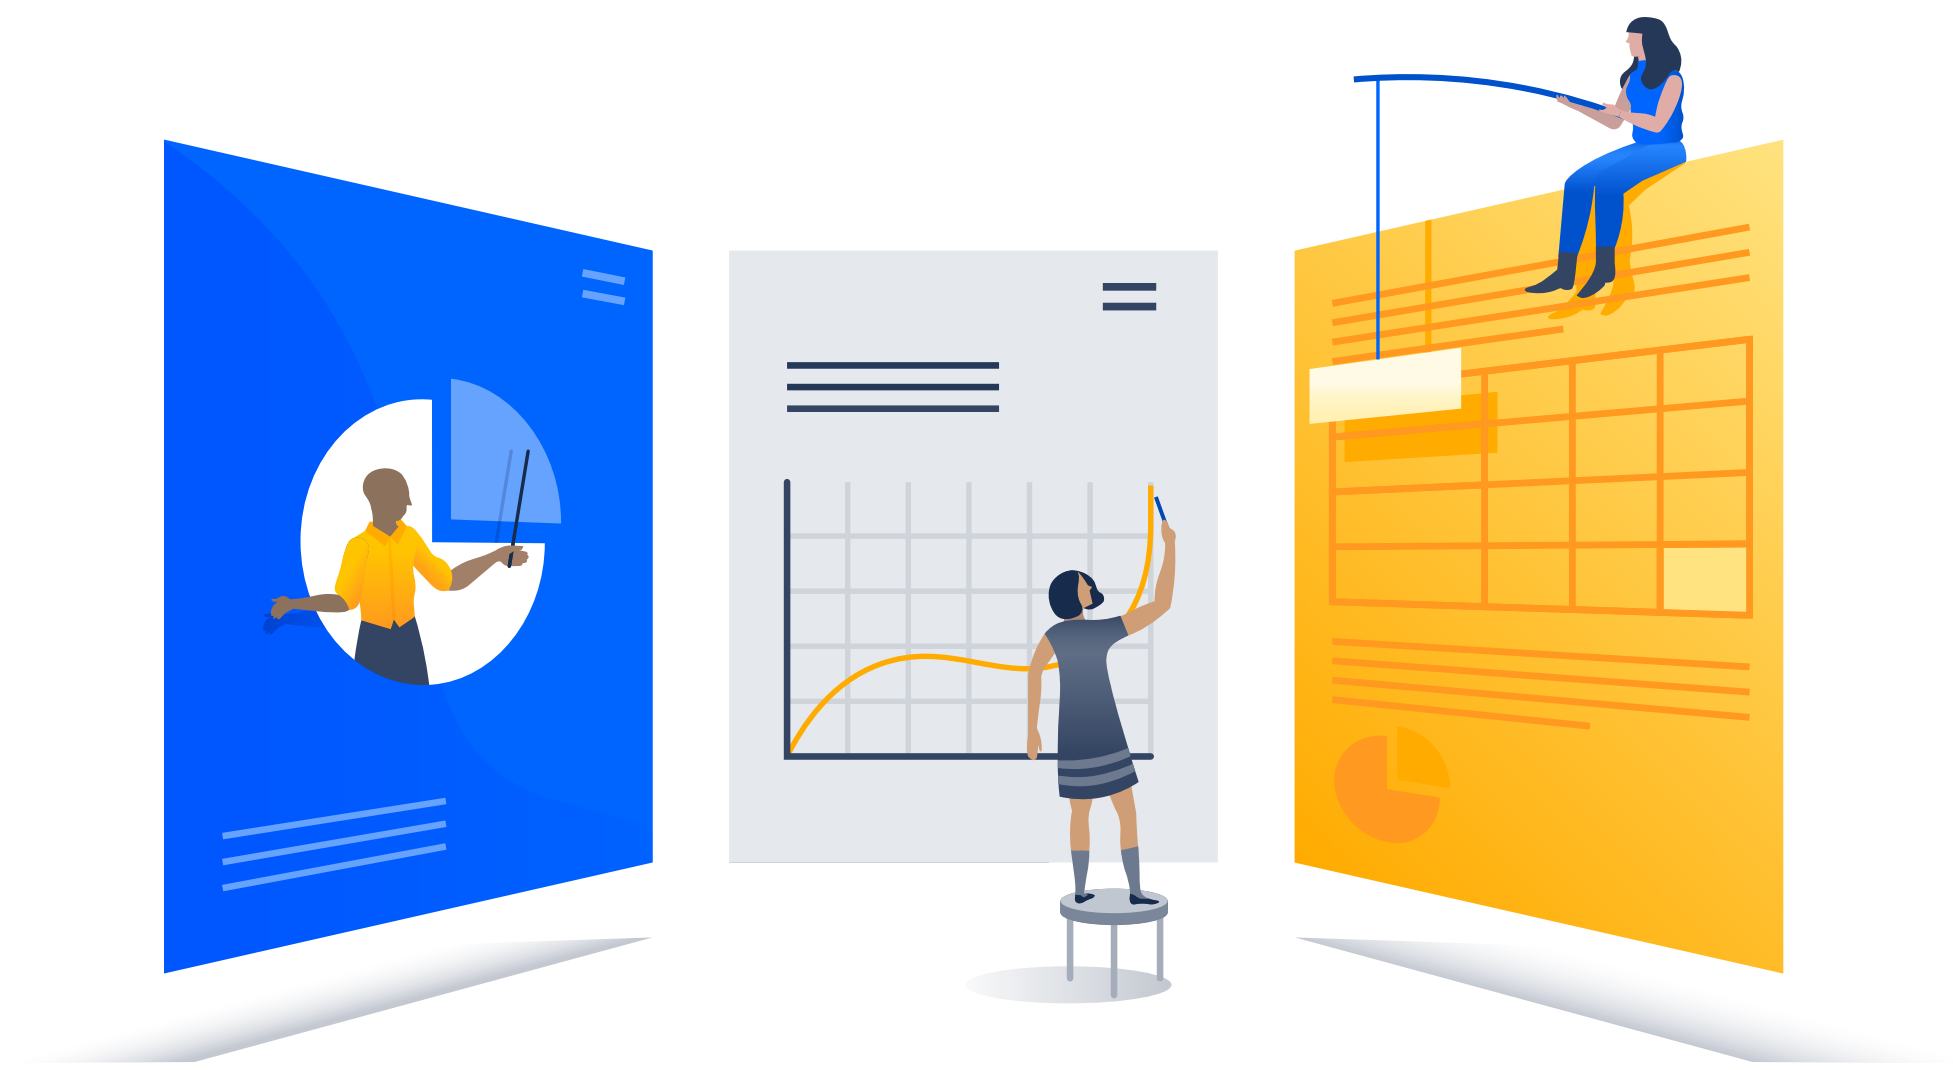

Poor communication

Lack of buy-in

No shared vision

Absence of trust

Lack of accountability

Failure to collaborate

Disengagement

# Simulations

We employ powerful in-room simulations that create breakthrough understanding around complex scenarios, business changes, tools, operating models or best practices.

# Value of simulations

Dynamic engagement and visioning from CxO level to IT Analyst

Cross organization understanding of business value

Accelerate alignment on the vision to achieve the "AHA!" moment

Powerful vehicle for engaging staff on the journey to future state
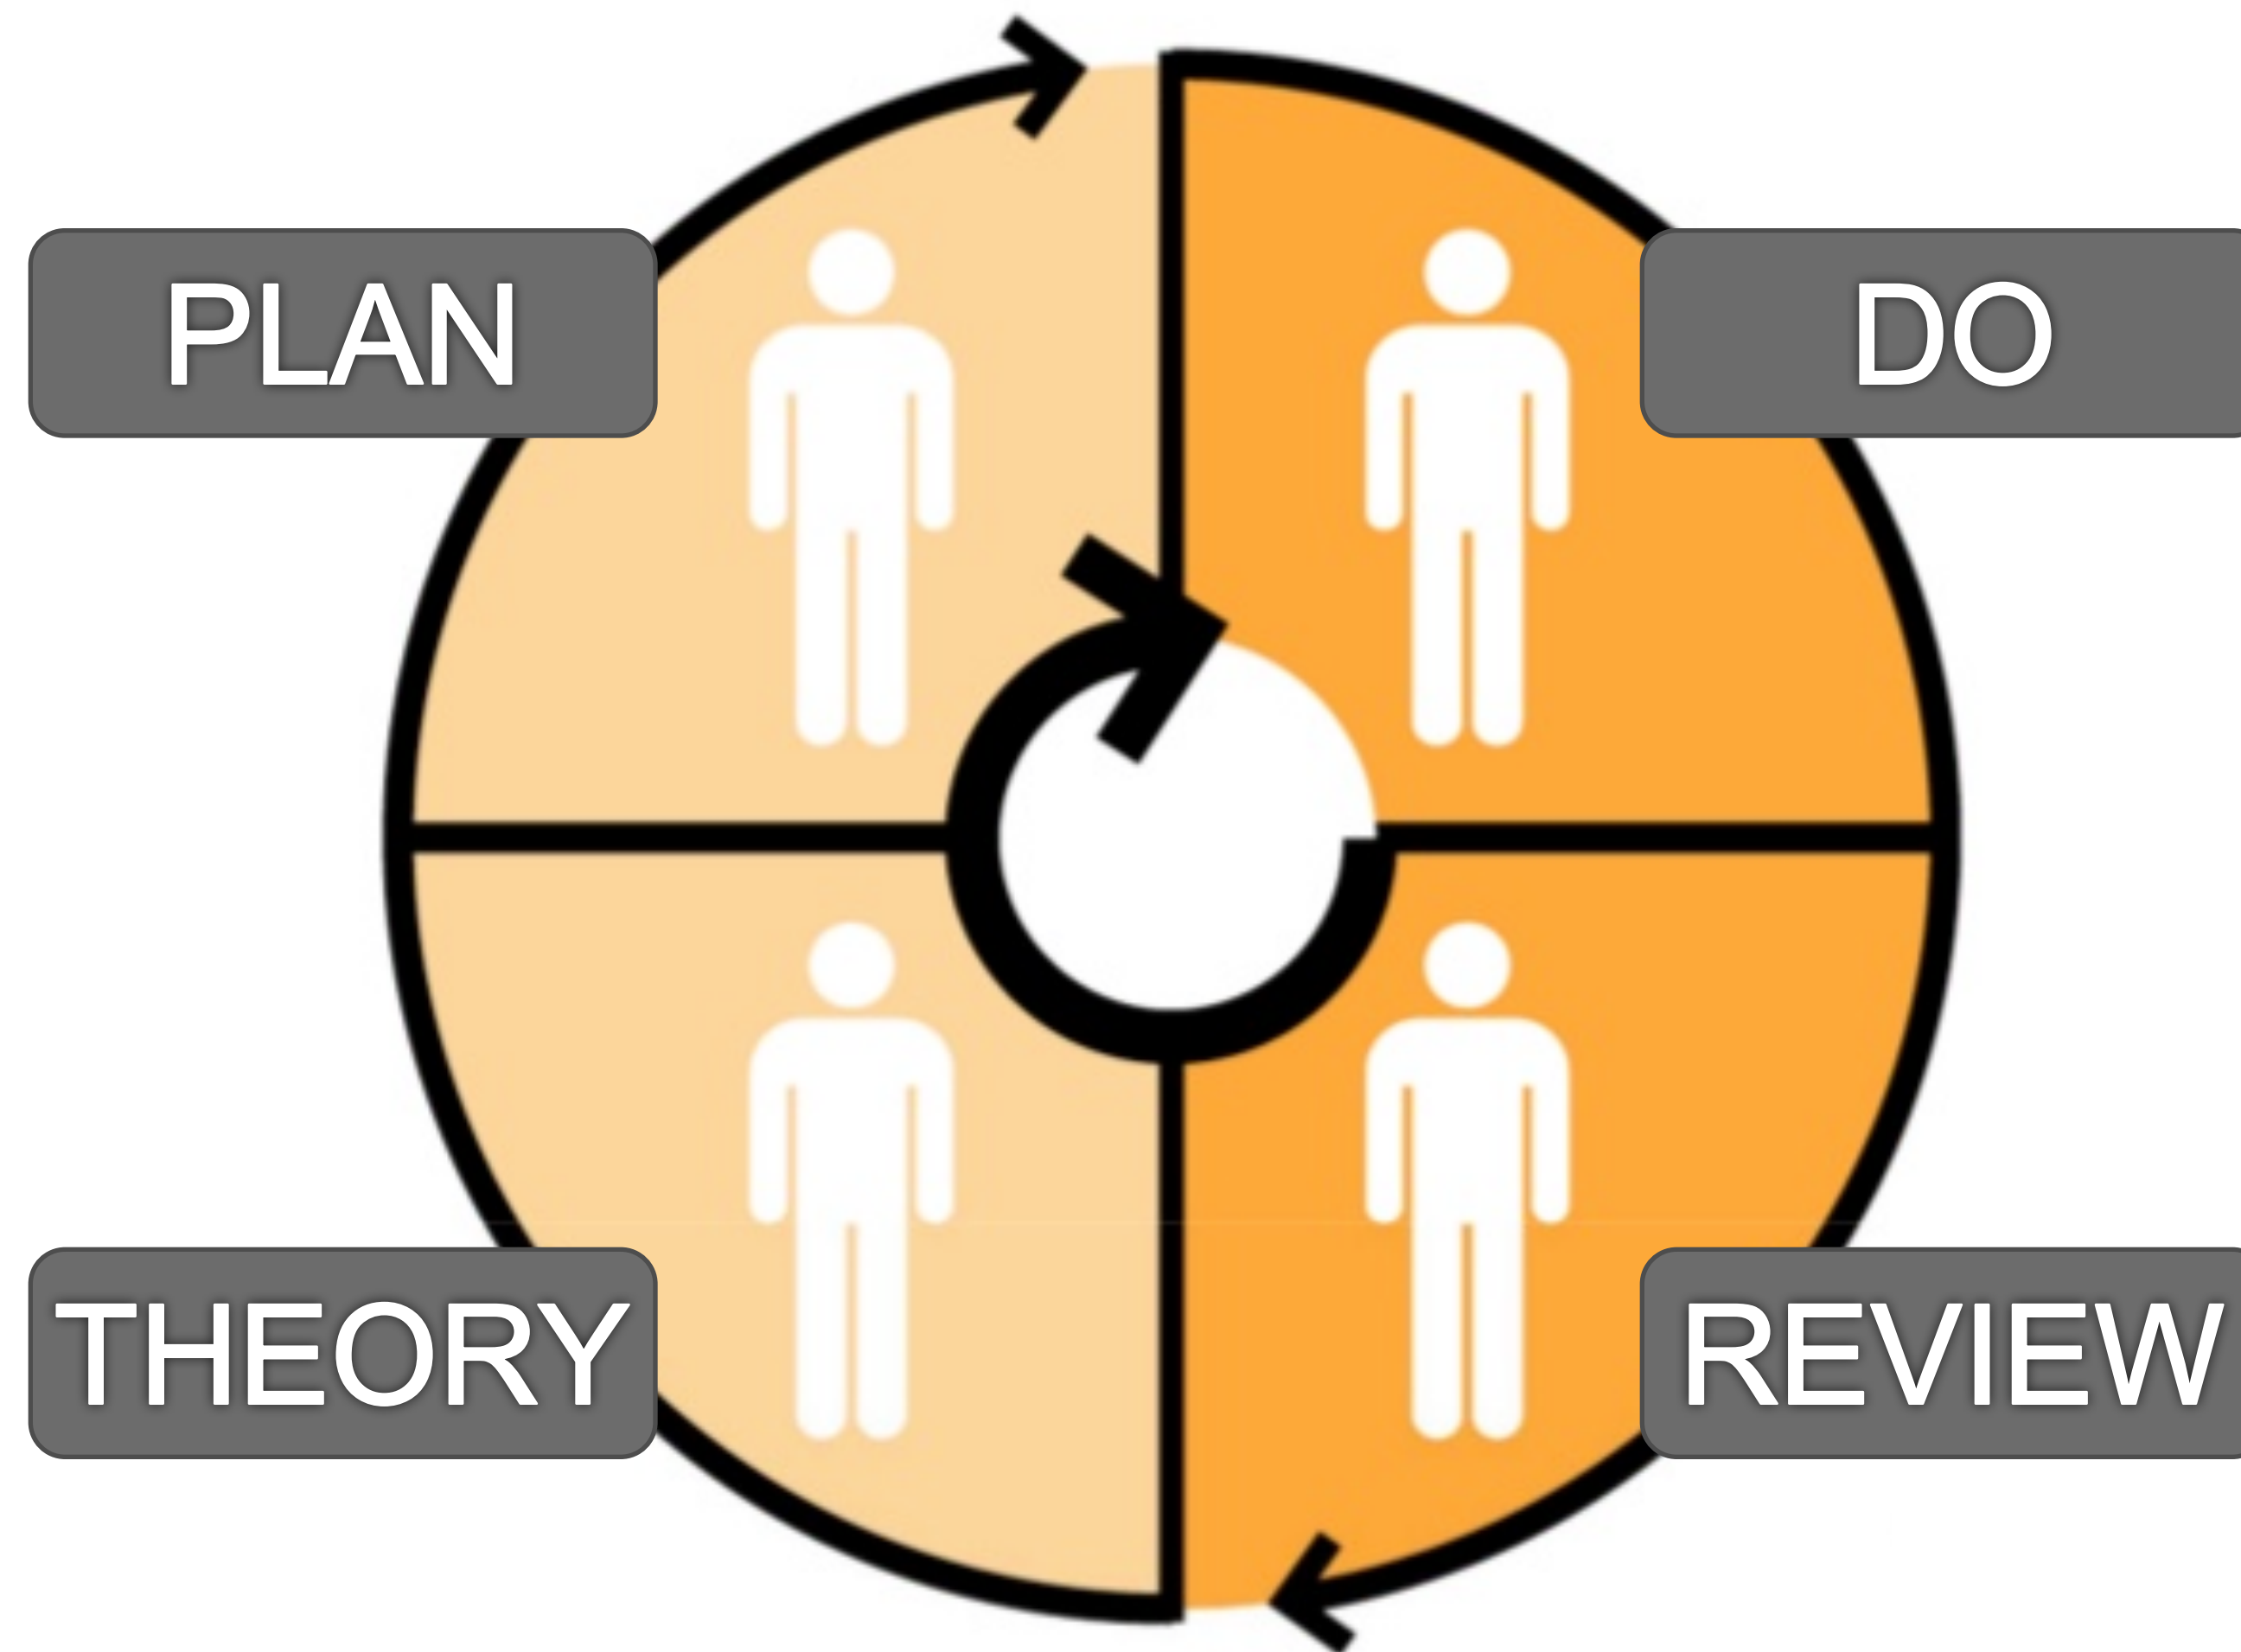

# Value of simulations

Reduce cultural and political barriers to organizational change

Increased buy-in, take up and advocacy for transformation

Reduced sales cycles and implementation times

Help your customer to deliver results, faster, improved customer satisfaction and increased revenues.

Kolb's Experiential Learning Cycle

# What DevOps IS

One Team Culture

Product Focused

Faster Delivery

Close collaboration

Breaking down traditional silos

Common success measures

Shift left

# What DevOps IS

One Team Culture

**Product Focused**

Faster Delivery

**Full product knowledge vs project**

**ROI**

**Experimentation (fail fast)**

**Higher quality**

# What DevOps IS

___

One Team Culture

Product Focused
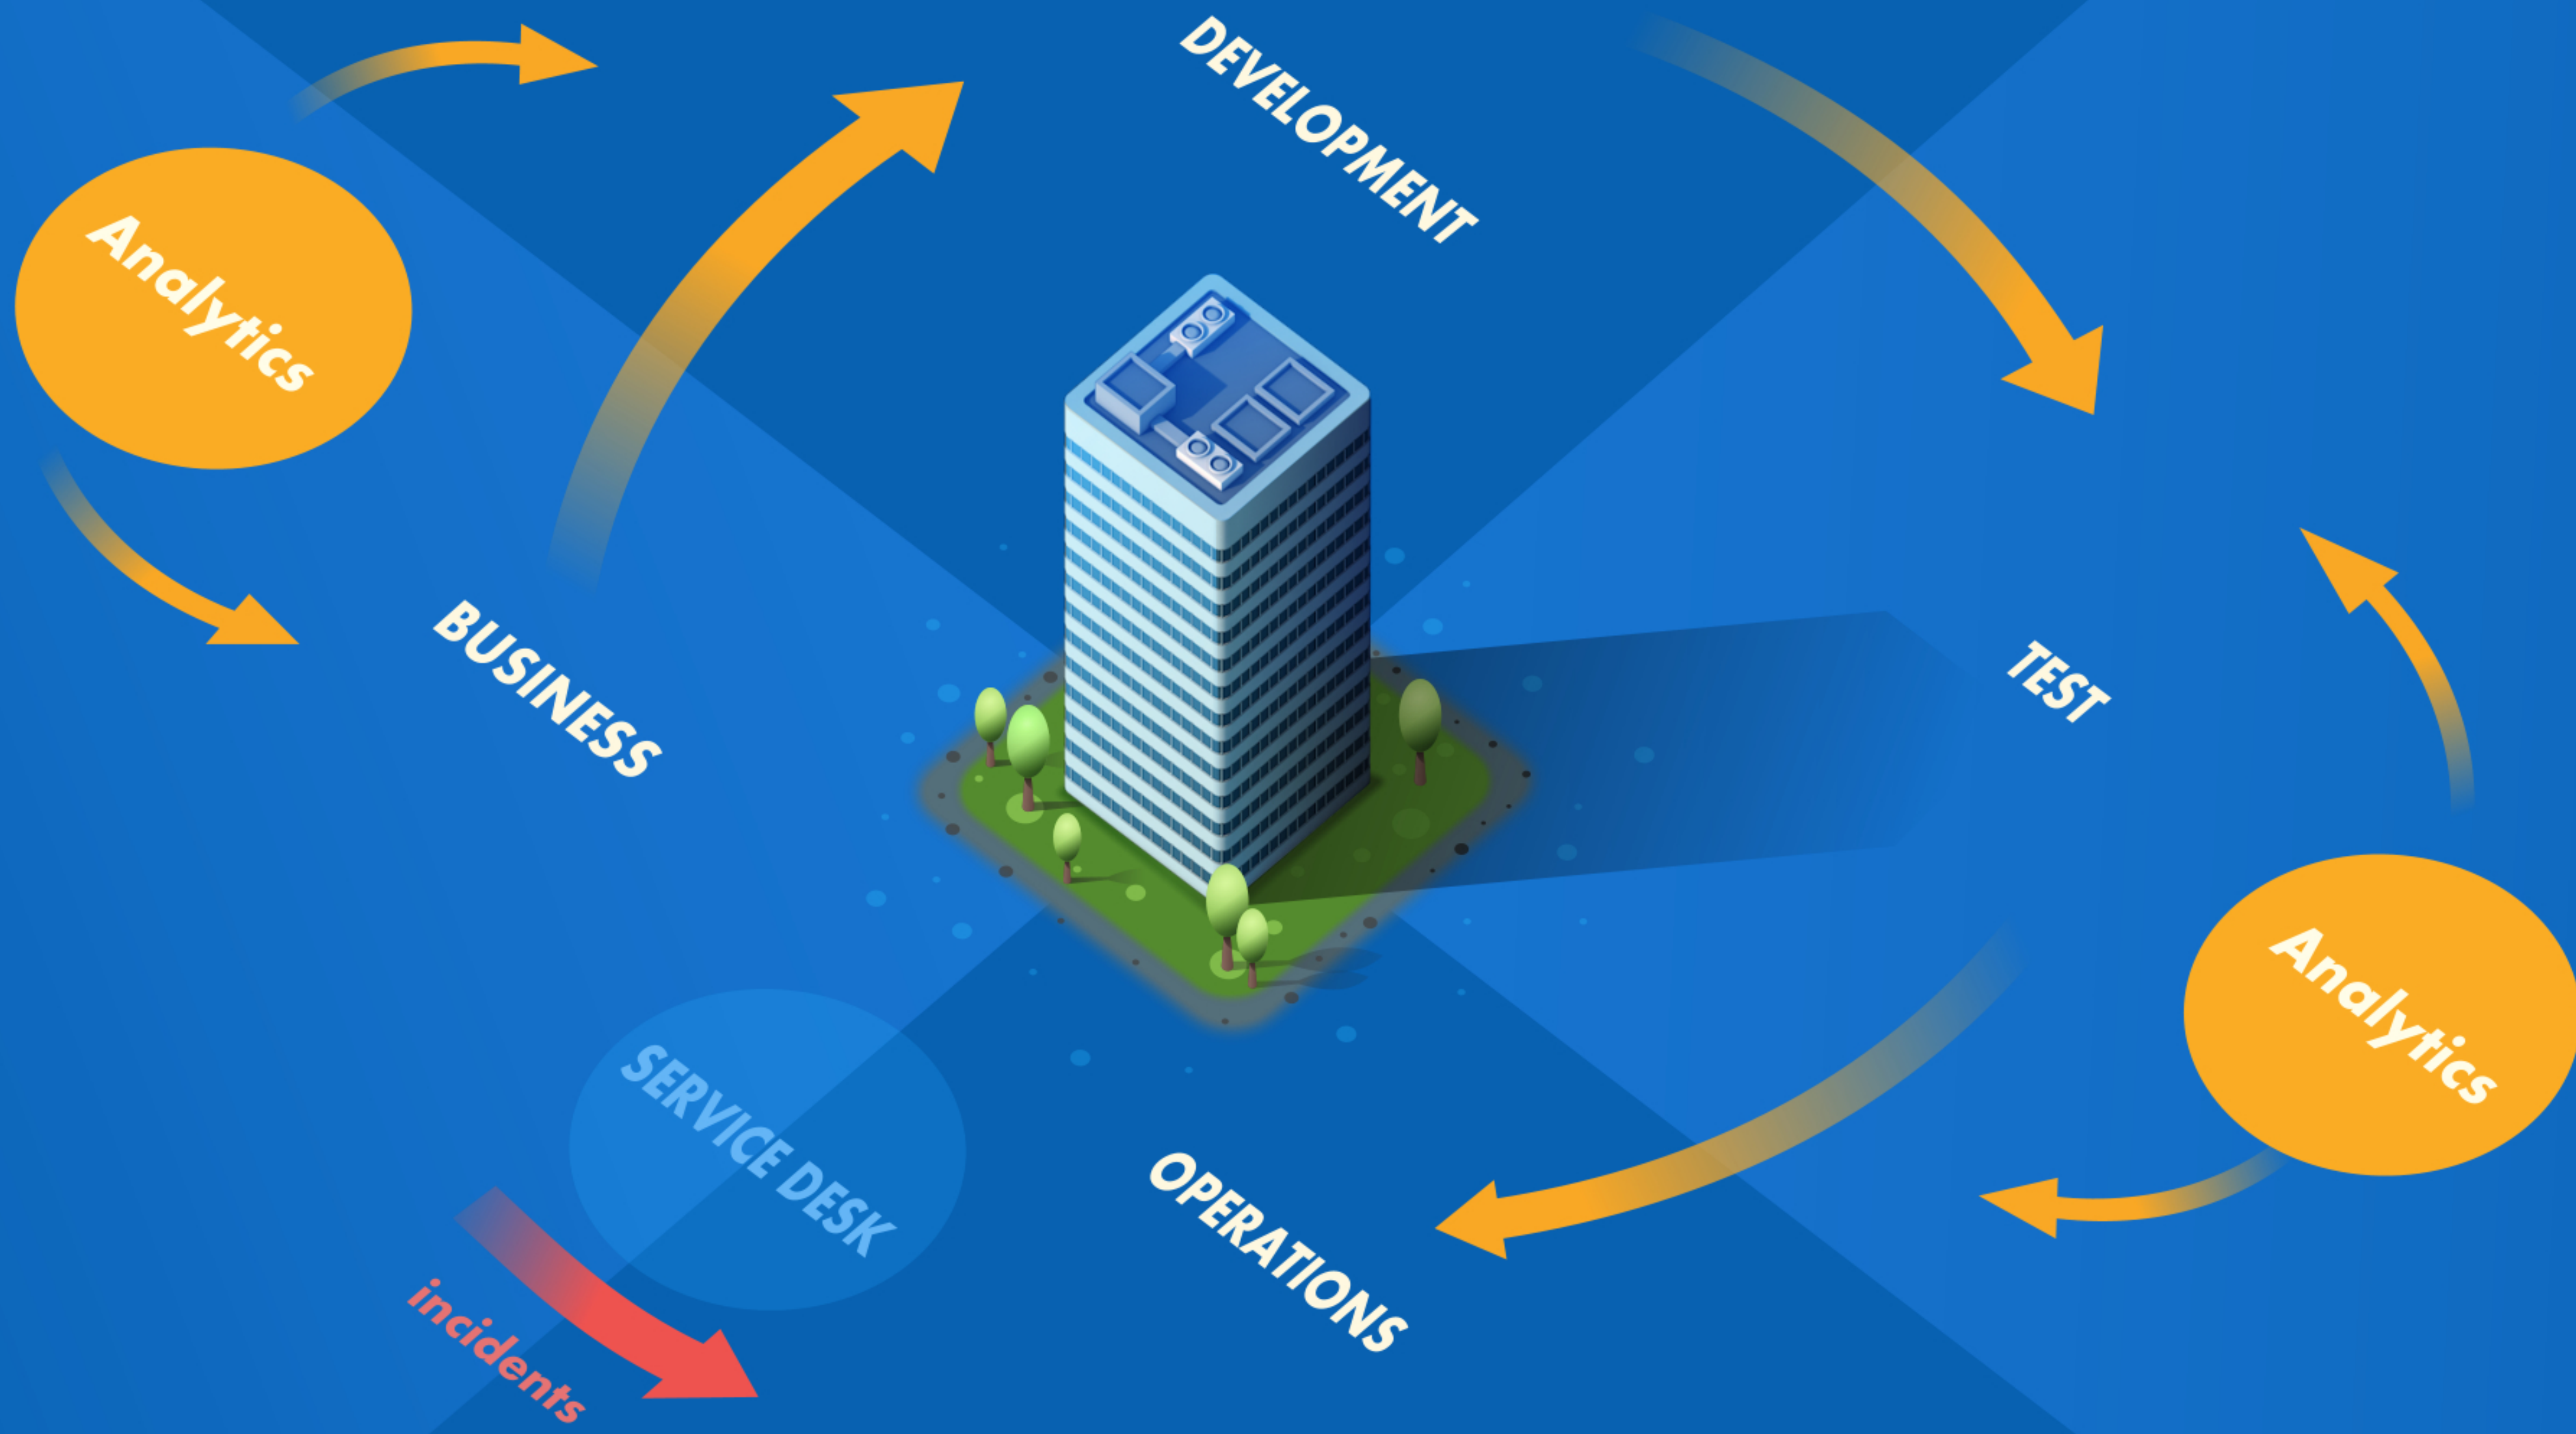

**Faster Delivery**

**More frequent deployments**

**Automation - all disciplines**
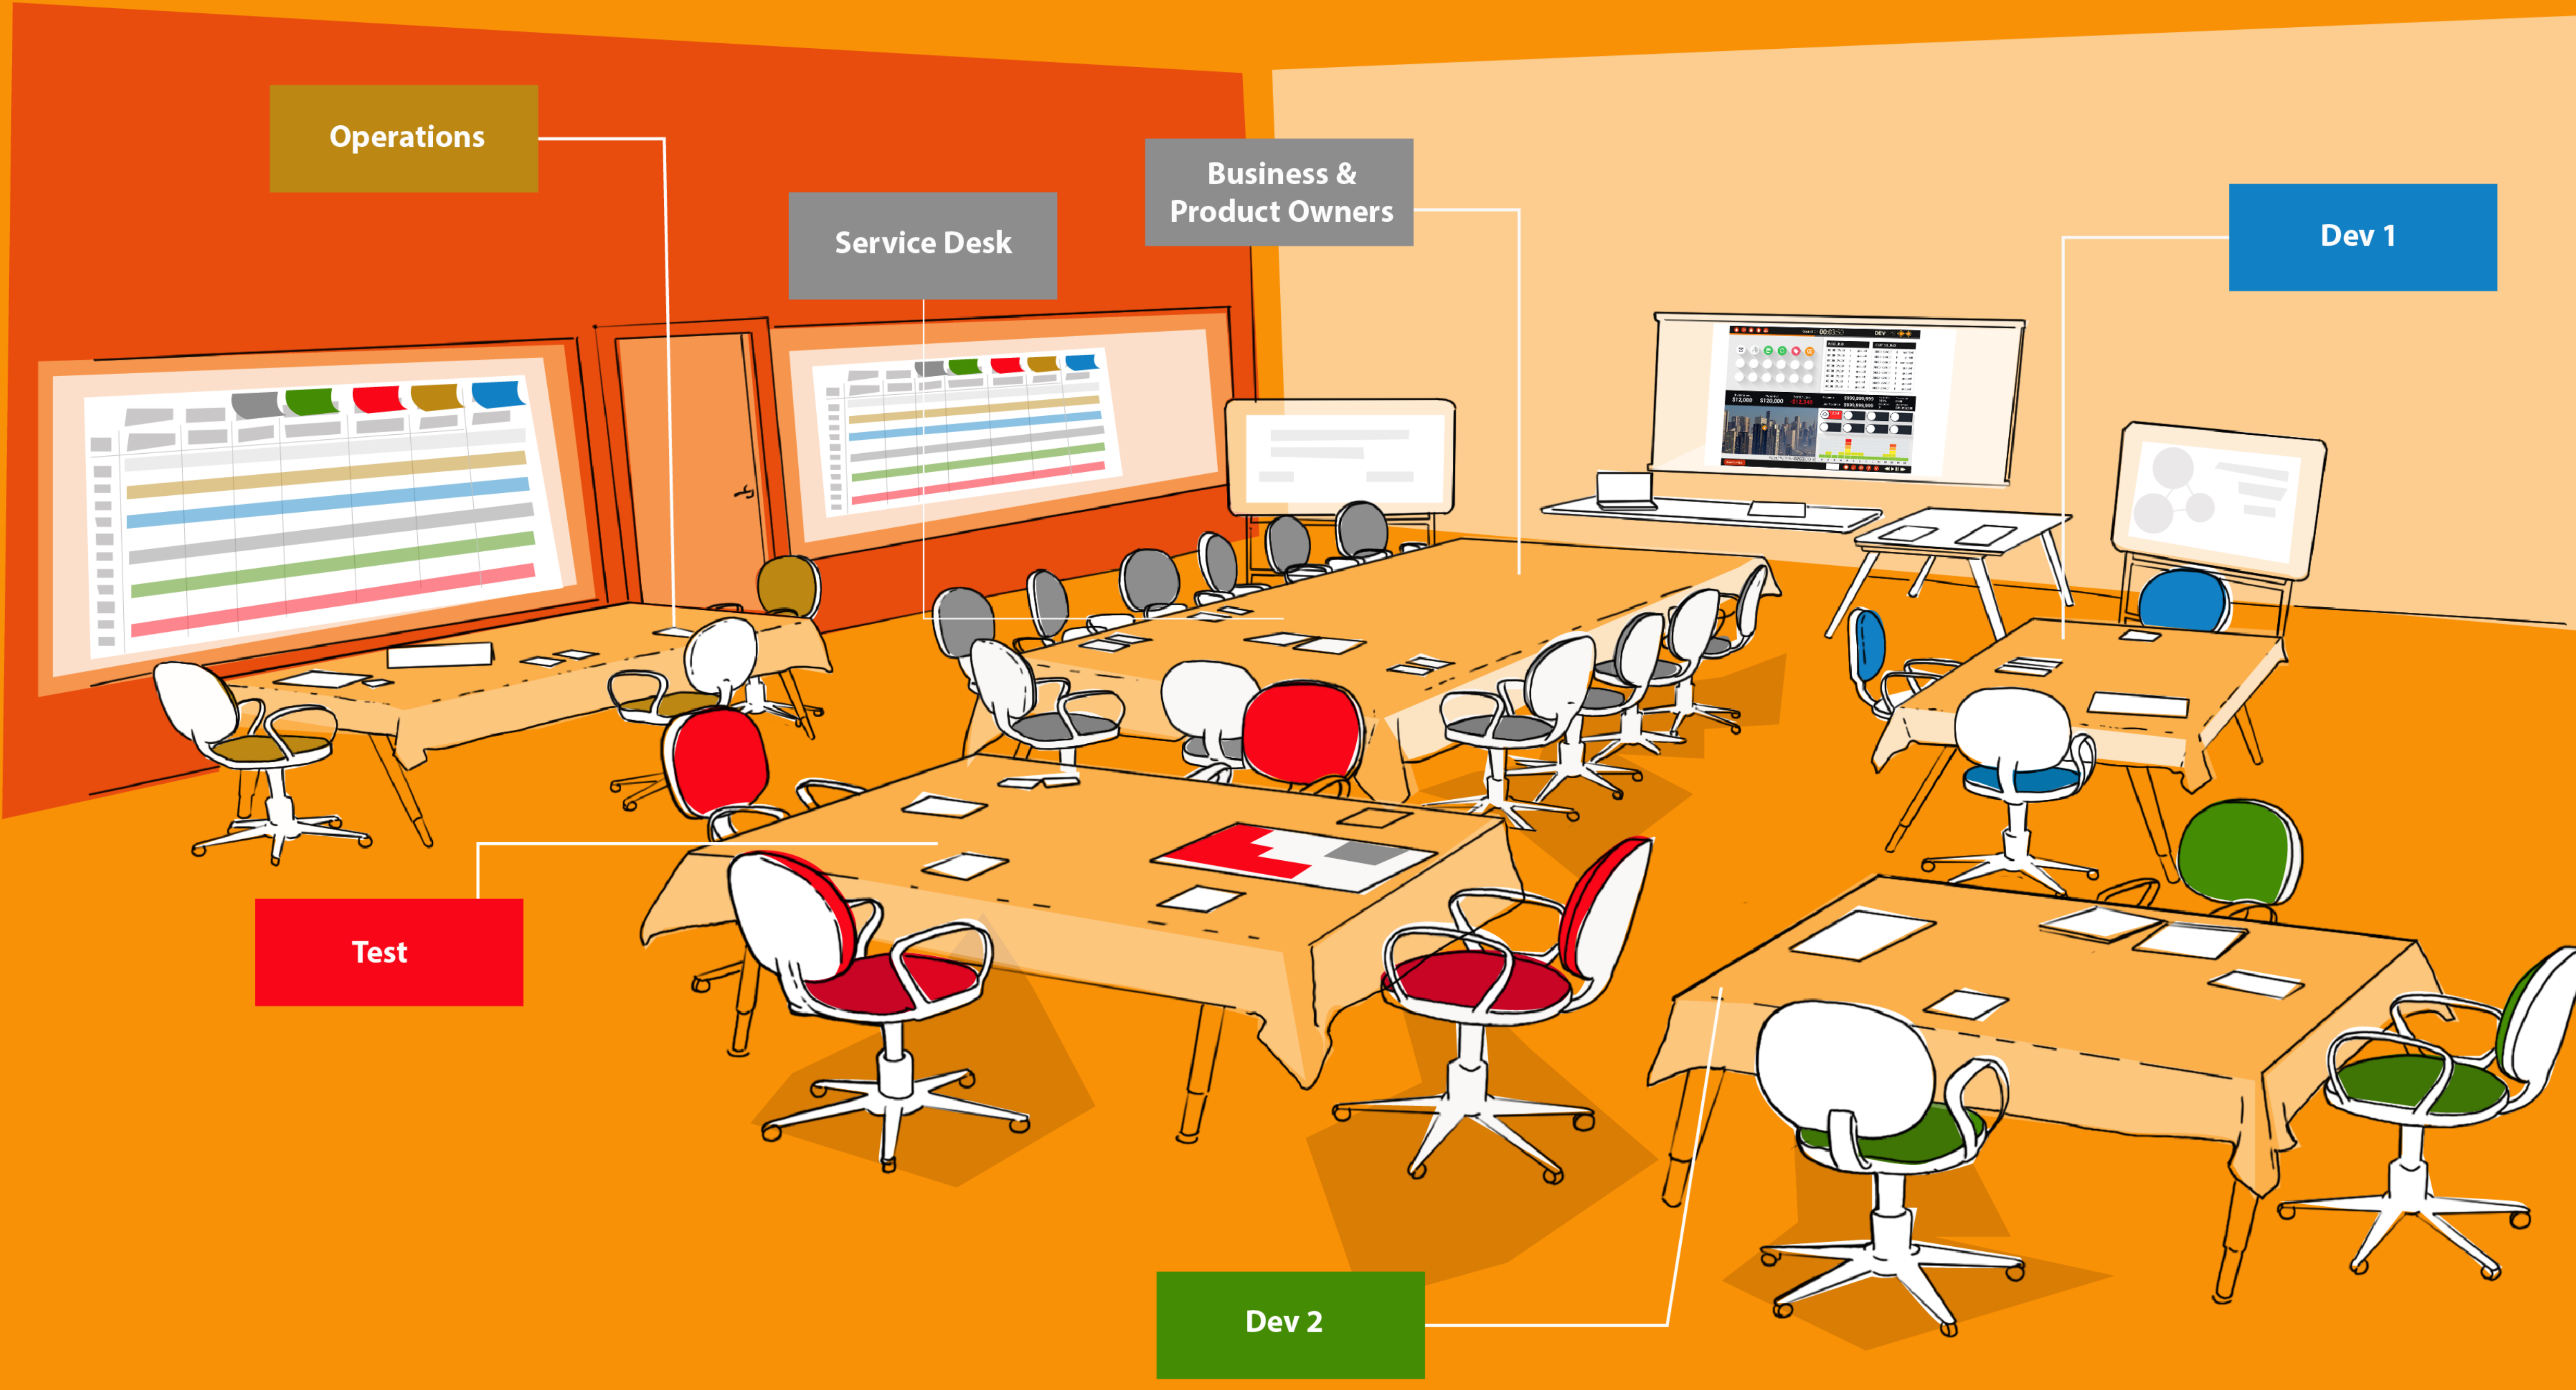

**Reduce waste**

**Leverage platforms**

# Simulation Scenario

# Atlassian is the culture and collaboration layer of DevOps

# Want to take this to your teams? Want to learn more?

Contact your EA or TAM (if you have one) or contact us at tam@atlassian.com.
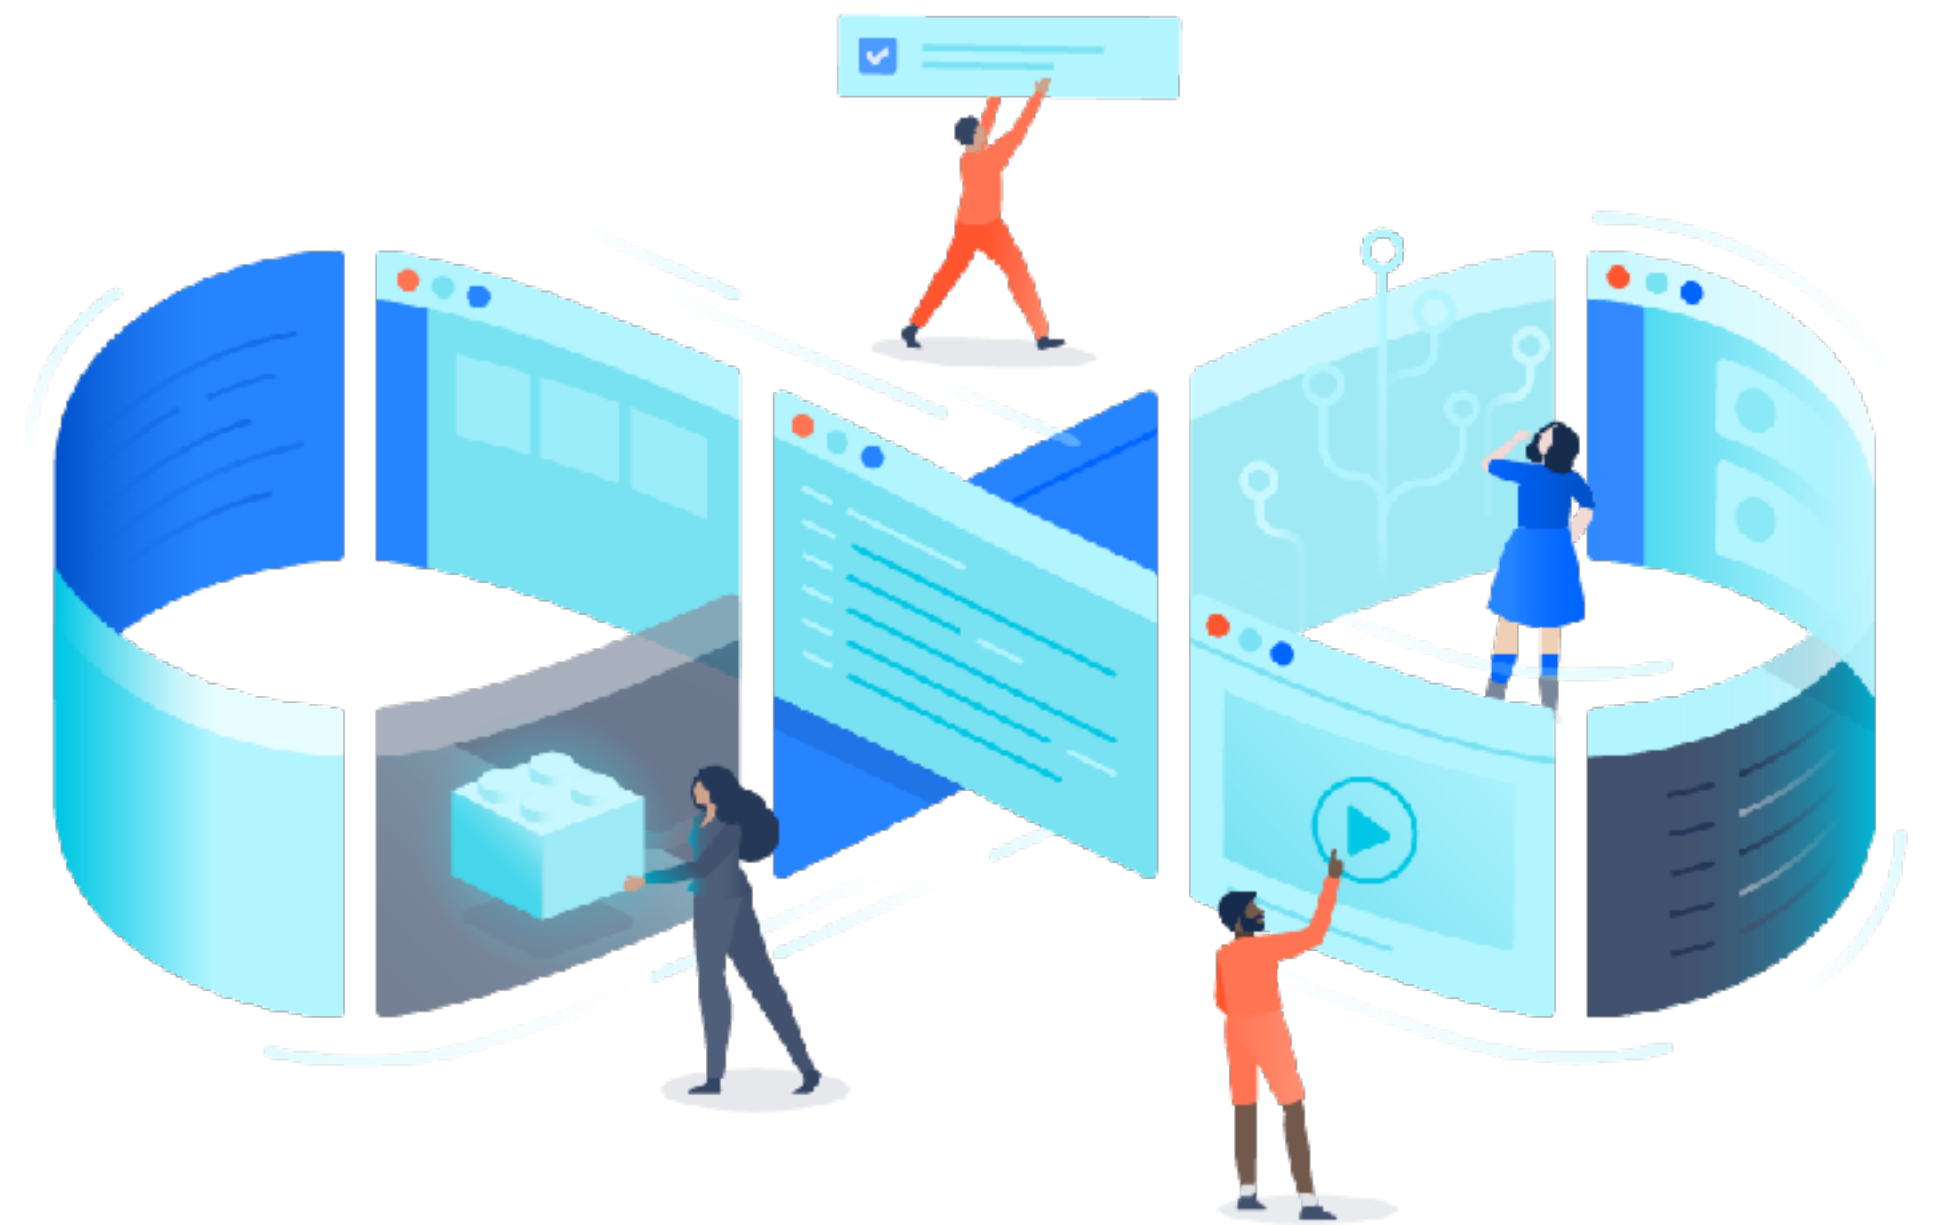

# Pricing
# $10,000 USD
# per session

Purchase Link

https://training.atlassian.com/product/onsite

## Participants

Anyone interested in DevOps. No prerequisites, but we require 16 to 20 participants.

## Structure

1 full day of training. Participants are separated into teams: the business, developers, operations, testers and service desk.

Through 3 rounds of simulations teams, deliver new applications/services and operate existing ones. Each round the business is graded on Profit and Loss, SLA and Customer Satisfaction.

## Logistics

Pricing includes trainer travel. Typically hosted at your facilities, but we can host if desired.

**Thank You!**
